PRODUCT UPDATE

Fuel Applications with Specified Industrial Hoses

*Multipurpose Hose: Series 7094/7095, 7107,
7134/7187, 7396, SS110, SS131*

The above multipurpose hoses incorporate oil resistant tube materials, but include this note in the product description shown in Parker Industrial Hose Catalog 4800: “Do not use in hot, dry air applications or with refined fuel.” The reasons for the fuel notation are:

- The hoses do not incorporate a helical wire or a static wire (except for Series SS110); transfer of refined fuel may create an accumulation—and catastrophic discharge—of static electrical buildup.
- The hoses are not intended or recommended for dispensing highly volatile fuel such as gasoline. Consequently, do not use the hoses for fuel dispensing or transfer service requiring API, NFPA, UL, ULC or any other agency approval or listing.
- The hoses are not intended for diesel fuel or gasoline engine applications; a more durable, heavier-duty hose is required due to abrasion, high temperature and application-related concerns.

The above hoses are suitable for the transfer of petroleum-based oil and diesel fuel when used within the other hose performance criteria shown in the catalog.

Contact Parker for applications beyond the scope of the above.
