NEW PRODUCT

Cergom™ Material Handling Elbow Connectors For Severe Applications

Parker introduces an advanced Cergom hose technology—elbow connectors that represent a huge leap forward in extending the service life of curved joints used to transfer severely abrasive materials.

Typically, bends in hose or pipe runs are subject to quick and severe damage due to focused and extreme internal blasting as high velocity/high volume abrasive materials make turns through rubber, steel, urethane, or combination connectors. Cergom elbows eliminate these weak spots in severe material transfer systems and are available in a wide range of sizes (2" ID to 20" ID) and lengths, with a variety of custom hose covers and built-in flange connections.

Cergom hose elbows can be connected to existing runs of conventional hose or pipe. For new runs or uniquely challenging applications, a Cergom straight-line hose and elbow connector system provides ultimate service life.

Engineering Support /Quotations /Shipping

For immediate responses for technical service and pricing, Parker has two toll-free Custom Made/Cergom Hose hotlines with nationwide service twelve hours every working day. Our experienced and savvy product designers will assist you with critical application recommendations, designs and quotations.
