Sales Advisory

NEW PROGRAM **WILDCATTER® Oilfield Products** *Program Introduction/Overview*

Mud Man. Roughneck. Roustabout. Wildcatter. These terms vividly capture the dangerous, dirty, risky and tough jobs associated with the oil and gas market.

Parker respects the extreme challenges presented by oil and gas exploration, extraction, refining and transportation. These difficult processes require special industrial hoses dedicated to robust performance, ease of handling and maximum service life in application.

The new Parker Wildcatter product offering meets these challenges by providing superior performance in transferring abrasives, chemicals, fuel, oil, slurries and water in multiple operations. Further, many hoses are now qualified with crimp couplings, providing industry-leading safety, durability and reliability.

The new program includes:

- new hoses (all program hoses feature the new Wildcatter logo)
- hoses with improved designs/performance characteristics
- many new crimp specs
- new series of crimp couplings

The Wildcatter trade name indicates the product is designed and manufactured for premium service in oilfield applications. However, Wildcatter products may be used in other industries, markets and applications where the product meets the required performance criteria.

The summary table on page 2 lists the products incorporated in the Wildcatter program. The table refers to individual documents that provide more specific information for each product series.
